

ABSTRACT OF THE DISCLOSURE

A navigation apparatus displays information required reaching a destination on a display screen to guide a vehicle
5 to the destination. The navigation apparatus includes first and second display control units. The first display control unit displays at least a part of a route to the destination on the display screen. The first display control unit also displays each of main points on the route as a mark on the display
10 screen. The second display control unit determines whether or not a user selects one of the main points. The second display control unit also displays a real image showing surrounding of the selected main point on the display screen on the basis of position information of the selected main point and real
15 image data corresponding to position coordinates, when the second display control unit determines that the user selects one of the main points.
